DETAILED ACTION

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

The prior art teaches a Group II nitride semiconductor field effect transistor with a source, a drain, a gate located between the source and drain, and a control electrode located between the gate and the drain region, and where an insulating layer is located below the control electrode. The prior art does not teach the above teachings in combination with the insulating layer below the control electrode being made out of one selected from the group comprising the insulating layer containing silicon and nitrogen as constituent elements, the insulating layer containing silicon, oxygen, and carbon as constituent elements, the insulating layer having a dielectric constant that is not more than 3.5, and the insulating layer being a multiple layered structure containing a first insulating layer formed on the substrate and being formed out of silicon and nitrogen and a second insulating layer being formed on the first layer and having a dielectric constant that is lower than the first insulating layer. These combinations have been found non-obvious thus allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Claims 1-20 are allowed.
